

Brief information on the Greenfinity Foundation

History

Since 2011, the Greenfinity Foundation has promoted sustainable environmental and climate protection projects across the globe and has taken appropriate measures for the conservation of natural habitats and the reduction of greenhouse gases in the atmosphere. Initially established as a foundation, the Greenfinity Foundation has been acting as a charitable association with headquarters in „the green heart of Austria“ (Graz, Styria) since 2017.

Mission

With its **climate protection projects**, the Greenfinity Foundation wishes to help minimise mankind's negative impact on the environment and to encourage sustainable environmental protection.

Guiding principle

In accordance with the guiding principle „**Together for our world. A future together.**“, the association doesn't believe that environmental protection is down to just a few dedicated people or merely a diversion for „green fringe groups“. Only with the active commitment of each individual can our planet's survival be guaranteed.

Five core areas

Alternative energy sources

Preservation of natural

Sustainable agriculture
and nutrition

Ecological footprint

Water, the source of life

The Greenfinity Foundation's commitment is mainly focused on the following five core areas:

- Alternative energy sources
- Preservation of natural habitats
- Sustainable agriculture and nutrition
- Ecological footprint
- Water, the source of life

Social aspect

The Greenfinity Foundation primarily provides support to **disadvantaged population groups** and people who live in regions that are greatly affected by climate change.

Cooperations

We work with partners from all over the world. One partnership that exists since the very beginning is the one with the Graz-based association Child & Family Foundation. Within the framework of joint school projects, the Child & Family Foundation enables the construction of educational facilities, for which the Greenfinity Foundation installs photovoltaic systems and builds wells.

Supporters

Aside from private benefactors, the myWorld group of companies is one of the Greenfinity Foundation's strongest supporters. Within the framework of their CSR program, myWorld not only promotes the association's projects through financial resources, but its committed employees also make a valuable contribution towards protecting the environment by actively participating in Greenfinity

Our projects

Since our foundation in 2011, we have already successfully implemented 96 projects in 25 countries. Many of these were smaller projects, such as the installation of solar power systems or the construction of wells for schools.

In addition, there are also larger projects that we implement together with our cooperation partners on a long-term basis. Our longest running project is our well construction project in Brazil, a cooperation project with the Styrian association „Quellen und Hilfsprojekte - Verein zur Förderung von Brunnen und Hilfsprojekten in aller Welt“. We have been involved in this project since 2013 and have already been able to construct more than 350 wells during this time thanks to our donors.

Our organic garden project in the Philippines is another project that we have been working on for more than 8 years. It is a joint project together with the association Child & Family Foundation and San Roque Elementary School. The aim of the project is to provide malnourished students and their families with a tool to improve their nutritional situation by teaching them about organic gardening and providing them with organic seeds.

Greenfinity Days

With its Greenfinity Days, the association wishes to motivate as many people as possible to join in: Within the framework of this initiative **regional waste collection campaigns and reforestation activities** are undertaken. The Greenfinity Foundation supports communities in the planning and implementation of their activities, in which **voluntary helpers** actively promote environmental protection.

Zero emission – the ecological footprint

Thanks to the Greenfinity Foundation's ecological **footprint calculator**, anyone can calculate their effect on the environment and can take the necessary measures for **compensation**: Each donation goes towards planting trees in the Greenfinity forests.
